

Nsight™ for Medical Practices powered by AvodahMed™

Improve the health of your patients, your practice, **and you**

Deep Learning to Optimize the Health of Your Practice

Nsight from AvodahMed provides a unique combination of modern technology and distributed intelligence to give you deeper patient and business insights and a more personalized approach to patient care.

Nsight is an EHR-agnostic conversational AI platform that listens in real time and learns about your practice and patients to help you identify leap-frog gains in revenue generation, cost savings, operational efficiencies, and most importantly, superior patient care.

When you power your practice with **Nsight**, practice efficiency comes into focus:

Eliminate wasteful provider activity

Create efficiencies to increase provider satisfaction

Streamline physical and virtual office workflows

Identify present and future candidates for revenue-generating ancillary services

Create equitable experiences for every patient to deliver the best care possible

For Your Providers

- Accelerates decision support & diagnosis
- Decreases documentation time
- Increases efficiency & time with patients
- Reduces burn-out
- Improves Provider's quality of life

For Your Patients

- Enables more 1:1 time with their care provider
- Improves health and outcomes
- Enhances communication accuracy
- Increases accessibility to care & services

For Your Practice

- Increased revenue & profit margin
- Improved operational efficiency
- Reduced 3rd party costs
- Mitigate risk

Make Providers Happy and Uncover Revenue Opportunities

Nsight takes the documentation burden off your providers so they can focus on patient interactions. Real-time transcription captures patient-provider dialog so providers can focus on patients instead of a computer screen.

During patient encounters, **Nsight** listens for cues that indicate your practice's ancillary services are warranted and serves up notifications to direct providers to recommend services that are beneficial to the patient and that can increase your bottom line.

Make Patients Feel Seen & Heard and Become the Practice of Choice

Real-time language translation focused on CANA (Clear. Accurate. Natural. Acceptable.) helps you meet your patients where they're at by serving up the language they understand the most, including American Sign Language. Differentiate your practice as a place where all are welcome and understood and will receive the care best suited to their unique medical presentation.

Make Your Practice a Fine-Tuned Machine and Outshine Your Competition

To deliver the best patient care, your practice has to fire on all cylinders. Nsight uncovers insights that will help you streamline your operations.

- Get maximum value from your EHR
- Connect your virtual and physical office workflows
- Eliminate the need for 3rd party apps for dictation, transcription, and telehealth
- Reduce risk to ensure HIPAA compliance

Nsight is a silent partner that's always listening and serving up insights to help you run the business in a way that optimizes provider satisfaction while maximizing patient care.
